

SACRIFICIAL ANODE (AL-ZN-IN) BRACELET

Overview: Galvanic cathodic protection anode bracelet designed for submerged subsea structures and monopiles.

Technical Parameters

Alloy Composition	Aluminum-Zinc-Indium (Al-Zn-In)
Net Anode Weight	150 - 300 kg (per half bracelet)
Electrochemical Capacity	2,500 Ah/kg (Minimum)
Closed Circuit Potential	-1.05 V vs. Ag/AgCl seawater reference
Utilization Factor	0.80
Insert Material	Carbon Steel (weldable to primary structure)
Installation Method	Welded or Bolted directly to submerged steel
Design Life	25 - 30 Years
Applicable Environment	Full immersion (Seawater & Mudline)
Design Standard	DNV-RP-B401

CONFIDENTIAL - INTERNAL PROTOTYPE DATA
